Every Cell is assigned a Unique RNA Address

Cell 1

UGAUCUAAGUGGAGGACGAA

Cell 2

GUUCAAGACAAUCACUCACG

Cell 3

UCAAUUAUAAAACUACAAACU

Cell 4

GAUGAUAGAGGUUUCUUUUA

Implementation

Need: To transfer DNA messages from one bacterial cell to another

Means: Bacterial Conjugation

Need: To specifically control who can read the DNA message

Means: Riboregulation

Our specific goals:

- Construct high-performance riboregulators**
- Harness bacterial conjugation**
- Transmit a coded message**
- Construct a bacterial learning network**

RNA
Polymerase

The Riboregulator: DNA

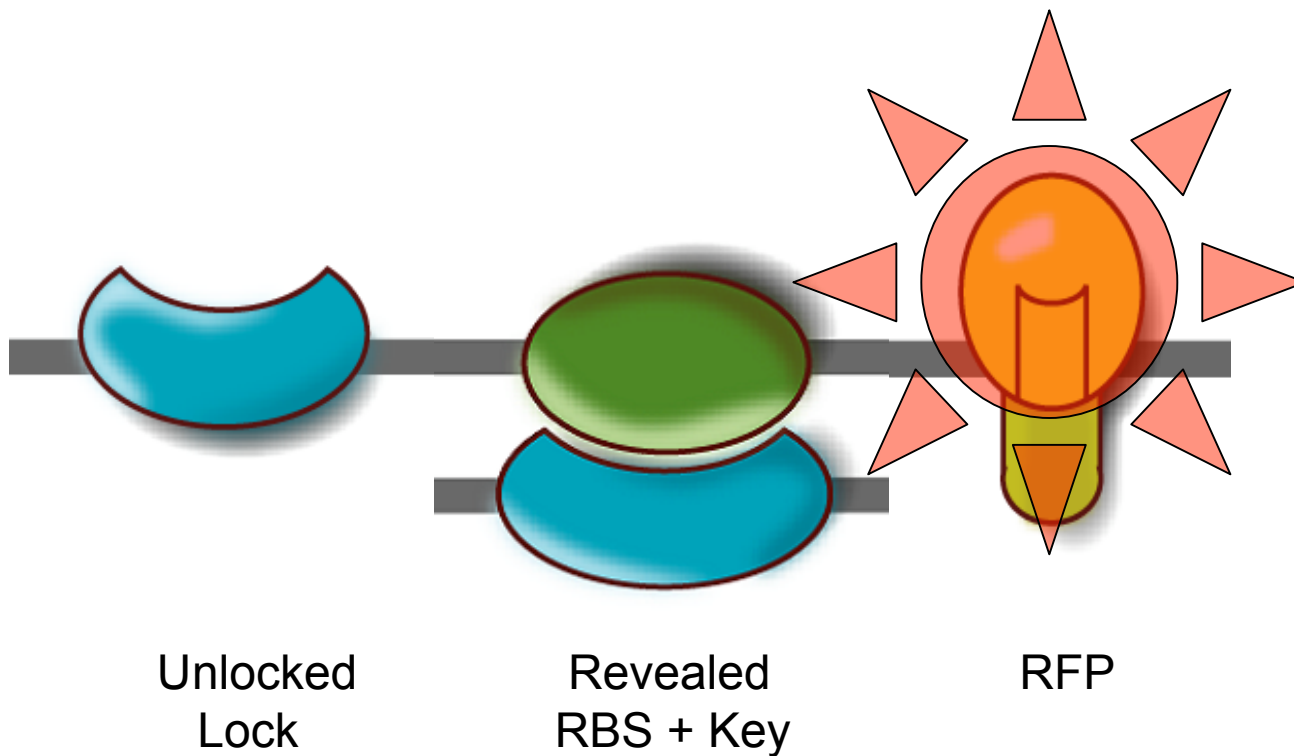

Locked Riboregulator: RNA

Ribosome

Unlocked Riboregulator

The Locks

		Alone ¹	Weak Key	Strong Key
<p>g u u u u c g u u c u c c a c u a a g a u c a a g a g a u c a u c - 5'</p> <p>g u a a g a a a g a g g a g a u a c u a g a u g . . .</p>	J01122	0.4% ²	1.2%	8.4%
<p>g u u u u c g u u c u c c a c u a a g a u c a a g a g a u c a u c - 5'</p> <p>g u a a g a a a g a g g a g a a u a c u a g a u g . . .</p>	J23071	6.4%	4.5%	19.1%
<p>g u u u u c g u u c u c c a c u a a g a u c a a g a g a u c a u c - 5'</p> <p>g u a a g a a a g a g g a g a u a c u a g a u g . . .</p>	J23048	0.5%	0.9%	3.8%

Shorter loops unlock better

Transcriptional terminators but not open reading frames improve activity

Bacterial Conjugation

Transfer of Message Plasmids

Cell Sends a Coded Message to Recipient Cell

DONOR CELL

RECEIVER CELL

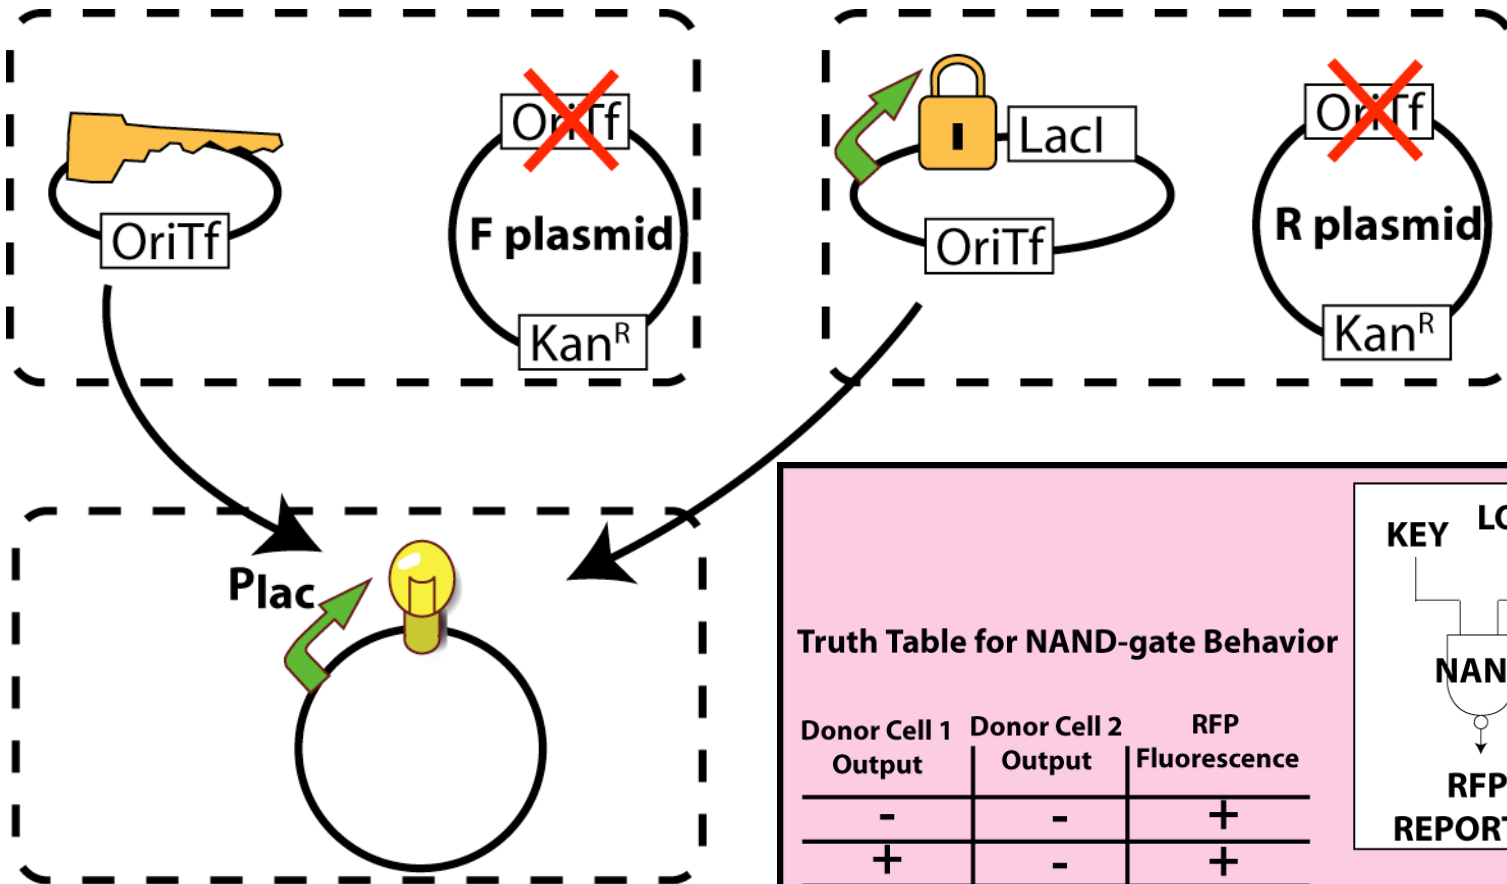

Conjugation and Riboregulators

Riboregulators Don't Effect Conjugation
 Conjugation Does Not Impede
 Riboregulator Function

NAND Logic Gates

Truth Table for NAND-gate Behavior

Donor Cell 1 Output	Donor Cell 2 Output	RFP Fluorescence
-	-	+
+	-	+
-	+	+
+	+	-

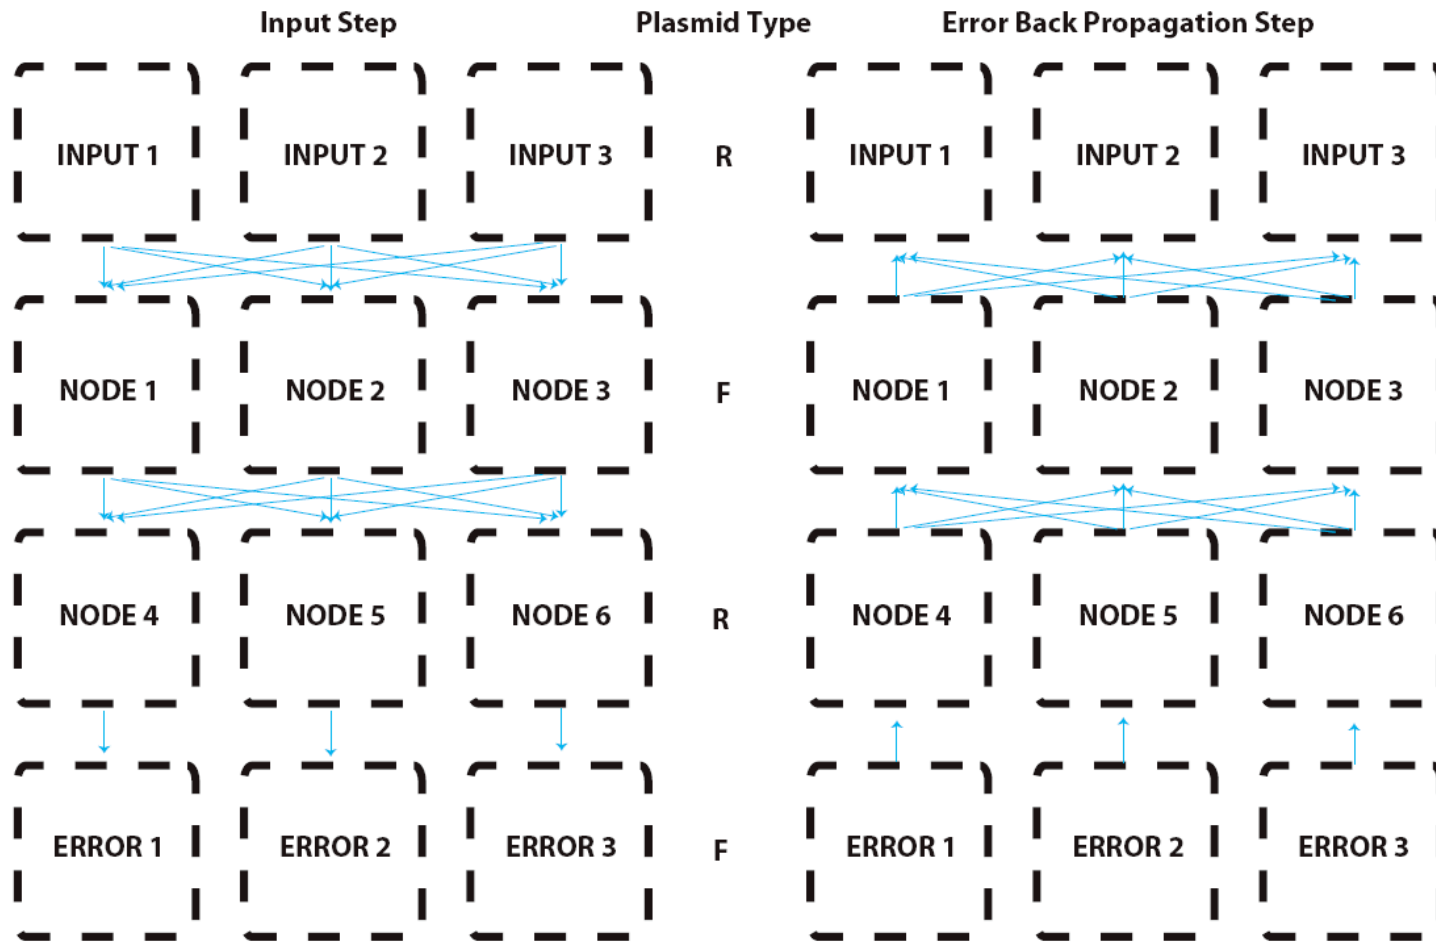

Building Computational Networks

- **Graded Response**
- **Inhibitory Signals**
- **Stimulatory Signals**
- **Parallel Signals**

Concentration in Culture gives Graded Responses
